

Accudock Dock of the Month

Month: October 2011
Location: Winfield, WV
Event/Club: American Electric Power

At a water treatment facility in West Virginia, maintenance teams needed to access a trough with a 45 degree angle. Accudock built an angled float section to run alongside the trough, along with a 'bridge-like' system that allows the entire dock to not sit on the lakebed when the pond is drained for servicing.
