

Your First Choice for Floating Dock Solutions

**Family-owned Florida-based company takes
'Made in America' to a new level**

Pompano Beach, Fla. -- (January 22, 2016) – For a family-owned and operated Florida-based dock-maker, the term 'Made in America' is more than a catchy marketing slogan; it's a daily pledge to its customers and employees.

AccuDock designs, builds and ships a wide-range of floating docks to customers around the world, so their pledge ensures a commitment to quality unsurpassed in the industry.

The growing company, owned and managed by father and son team John and Jason Harrison, isn't a secret in the rowing and watersports industry. Founded in 1993, AccuDock's sales and reputation have grown tremendously around the world over the years. The company's commitment to excellence in products and customer service is a big reason for their success.

The company has designed and built floating docks for large-scale projects previously, including the 2015 Junior World Rowing Championships in Rio and 2013 World Rowing Championships in South Korea, Oklahoma City Boathouse and Nathan Benderson State Park in Sarasota, just to name a few. They have also been called upon to consult and design floating docks for Div. I collegiate rowing programs around the country.

"Our company takes the words 'Made in America' seriously and works to deliver quality craftsmanship and outstanding customer service while still being competitive on price," said John Harrison, AccuDock's founder and president. "While other companies may be forced to cut costs by purchasing much cheaper products internationally, we are steadfast in our goal of ensuring that virtually every part and product we use comes from the U.S.A."

As an example of their commitment, AccuDock purchases hundreds of thousands of pounds of aluminum each year and recently had the opportunity to buy from a Chinese company at half the cost, but declined, citing the need to honor their American-made pledge. All raw materials processed by AccuDock are made in the United States.

According to Jason Harrison, AccuDock's general manager, delivering on this stage and at this level takes a total team effort.

"We pride ourselves on using American-made products for virtually everything we design and build, so we look at this as an opportunity to showcase our many partner companies around the U.S. as well," said Harrison. "Many international companies with whom we work look at the 'Made in America' stamp on our products as a statement of quality and a higher standard."

In addition to designing for rowing events, AccuDock handles an array of commercial and residential installations, including offering ADA compliant design installations for kayak and canoe launch docks.

The company also handles large-scale government contracts, including building docks used to refurbish Naval ships in Tokyo. AccuDock's GSA contract gives the highest discounted rate for government project purchases and provides a full product catalogue for direct purchasing by governmental agencies. Additionally, AccuDock is ISO (International Organization for Standardization) certified, which means it meets the rigorous international standards on which many global companies base their purchasing decisions.
