What is an AccuDock Work Float made out of?

Each float consists of a high density polyethylene (HDPE) plastic, which completely encapsulates a block of EPS foam.

What is the surface texture?

The surface is the same plastic as the sides and bottoms. It is a non-skid levant texture finish which is a slightly raised texture providing excellent traction. The surface is not slippery when wet and because of the white in color, it is cool to the touch even during hot summer months.
